EDUCATION

LDRP-ITR; KSV University
B.E. in Information Technology

sept 2022-Jun 2026
Current **CGPA (7.28/10)**

SKILLS

IT & Technical Skills: System Troubleshooting, Hardware & Software Support, Windows Configuration, Network Troubleshooting Basics, IT Operations, Technical Support, Documentation

Languages & Tools: Python, SQL, MS Office, Excel, PowerPoint, Google Workspace, Git & GitHub, VS Code Windows OS, Jupyter Notebook

AI TOOL & Exposure: Python, Machine Learning, Deep Learning, Image Processing, Data Preprocessing, Model Evaluation, ML Libraries, DL libs and frameworks

Other Skills: Research Implementation, Team Leading, Graphic Design, Numerology, Palm Reading, Astrology

INTERNSHIP

Research Intern- *SAC, ISRO Ahmedabad* May 2024 - July 2024

- Worked on the project titled **"FMCW Lidar Preprocessing Stage Problem Identification and Efficient Solution** "Developed and implemented efficient preprocessing techniques to enhance system accuracy and reliability
- Collaborated with senior Scientists to validate solutions and optimize performance

PROJECTS

Deepfake Detection | Pytorch, CNN, Bilstm.

- Engineered an advanced multimodal deepfake detection system that integrates CNN-based spatial feature extraction with BiLSTM-driven temporal pattern recognition, employing feature-level fusion, ensemble modeling, and extensive data preprocessing to achieve 91% accuracy on a custom audio video dataset, enhancing robustness against diverse forgery techniques.
- Conducted extensive error analysis and implemented model explainability techniques (Grad-CAM) to interpret deepfake localization and enhance model trustworthiness.

ResolveIT – Employee Helpdesk Ticketing System | Python, SQLite, Flask

- Developed a web-based IT helpdesk ticketing system for managing employee technical support requests.
- Implemented authentication, role-based access, ticket tracking, status management, and admin dashboard features.
- Built using Flask, SQLite, SQL Alchemy, and Bootstrap following a modular project architecture.

Image-Based Caption Generator (Gujarati) | Python, Pytorch, CNN(ResNet-18), GRU

- Designed and implemented a low-resource Gujarati image captioning model using Flickr8k/30k datasets, addressing language morphology challenges through Sentence Piece tokenization.
- Achieved BLEU-4 scores of **0.225 (Flickr8k)** and **0.192 (Flickr30k)** using a ResNet-18 encoder with a GRU-based decoder, setting a benchmark for Gujarati captioning.
- **Published research paper (Paper No. 1837):** "*Image-Based Caption Generation for Gujarati Language Using Deep Learning*" in **ICDSA 2025, Springer (Scopus Indexed, Vol. 6)**

ACHIEVEMENTS

- **1st Runner-Up in Mission CHANDRA**, a state-level competition organized by **SAC-ISRO, GUJCOST, DOT, and Gujarat Science City**.
- **Led teams in national hackathons** like **SIH** and **SSIP**, delivering successful solutions in multiple innovation-focused challenges.

INTERESTS

Cricket, Badminton, Travelling, Reading Poetry Books, Astrology, Palmistry.
